DaaS Product Framework: Tiered Licensing Model

PHAROSIQ CONFIDENTIAL

MARCH 2026

The core constraint: Contacts + content consumption data is directly competitive with pharosIQ's lead generation business. A buyer with both can self-serve the exact product Marty's team sells. Contacts + intent topic signals (without content detail) is not competitive. It tells you who is researching what, but not which specific content they consumed. This distinction is the foundation of the tiered model below. Each tier defines what we sell, who can buy it, and who is excluded, so there is no ambiguity in the field.

Scope: These tiers represent access to the **full universe** of pharosIQ data (360M+ contacts, 1.6M engaged signals, 650+ intent categories). Buyers who only need coverage for their own target account list receive a **targeted account feed**, a scoped delivery of the same tiered data, filtered to the buyer's named accounts. Targeted feeds follow the same tier structure and buyer restrictions. Pricing adjusts based on volume and scope.

	TIER 1: PERSONA + INTENT TOPICS	TIER 2: CONTACTS + INTENT (BRAND DIRECT)	TIER 3: CONTACTS + INTENT (MARTECH OEM)	TIER 4: CONTACTS + CONTENT (ENTERPRISE)
Deliverable	Audience-level behavioral profiles matched to intent topic categories. No PII. Account-level and persona-level signals: industry, title function, seniority band, company size, intent topic, engagement source.	Contact-level records: name, title, email, company, engagement source, intent topic. Delivered via API, flat file, or cloud sync on a rolling 90-day signal window.	Contact-level records plus intent topic signals, embedded into the buyer's platform via OEM or API. The buyer's customers use pharosIQ data natively inside the platform.	Everything. Contact records, the specific content assets consumed (whitepaper, webinar, content piece), plus full intent topic signal. The complete behavioral fingerprint.

	TIER 1: PERSONA + INTENT TOPICS	TIER 2: CONTACTS + INTENT (BRAND DIRECT)	TIER 3: CONTACTS + INTENT (MARTECH OEM)	TIER 4: CONTACTS + CONTENT (ENTERPRISE)
Who buys	Any buyer. No restrictions. Brand Direct, Wholesale, Agency, Martech, lead gen competitors. This is the base layer for all buyer types.	Brand Direct buyers. Companies using the data to power their own marketing and sales motion, not reselling or redistributing it. Examples: AWS, Lenovo.	Martech platforms that embed pharosIQ data into their product as a native signal layer. Examples: Metadata, RollWorks.	Enterprise platform companies where pharosIQ data becomes core infrastructure. Examples: HubSpot, Salesforce.
Who is excluded	No one. Tier 1 is the entry product for every buyer type. Still beats Bombora data (account + topic only). We go beyond account to provide persona.	**Lead gen businesses, competitors, and any buyer whose model involves reselling or redistributing contact records to third parties. ***	**Brand Direct buyers with no platform use case. Lead gen businesses. Any buyer who will activate the data themselves rather than embedding it into a product. ***	**Brand Direct buyers, martech platforms without a large embedded user base, lead gen businesses, any buyer without a platform use case at enterprise scale. ***
ACV range	$60K to $96K **$5K-$8K/MO**	$144K to $300K **$12K-$25K/MO**	$300K to $504K **$25K-$42K/MO**	$1.2M+ minimum **$100K+/MO**
Delivery	API, flat file, direct enrichment, cloud delivery, segment push to DSP, LiveRamp, CDP, SSP (PMP)	API, flat file, cloud sync. Buyer activates data inside their own stack.	OEM or API embed into buyer's platform. Requires downstream flow-down provisions and sub-licensing terms in MSA.	OEM or API at scale. Per-user-block pricing tied to deployment scale. Enterprise-grade MSA required.
Channel conflict	None. No PII, no lead-level detail. Does not replicate CS product.	Low. Contact + topic signal (no content detail) is defensible. Chris Vriavas confirmed this line on 2026-03-27.	Moderate. Platform embeds mean pharosIQ data reaches the platform's downstream customers. Anti-competitive clause required.	Highest. Content consumption data is the raw material of lead gen. This tier is only for enterprise platforms where the revenue justifies the exposure. Requires the strongest contractual protections.
MSA requirement	New DaaS MSA required (Section 4.2 blocks	New DaaS MSA with permitted use restrictions,	Enterprise DaaS MSA with downstream flow-down	Full enterprise platform license. Per-user-block

	TIER 1: PERSONA + INTENT TOPICS	TIER 2: CONTACTS + INTENT (BRAND DIRECT)	TIER 3: CONTACTS + INTENT (MARTECH OEM)	TIER 4: CONTACTS + CONTENT (ENTERPRISE)
	commercial use for both contact and persona). Simpler compliance surface: no PII, fewer downstream restrictions.	anti-competitive clause, caching addendum, data destruction terms.	provisions, sub-licensing terms, anti-competitive use clauses, audit rights.	pricing exhibit. Downstream flow-down, sub-licensing, anti-competitive, caching, audit, and data destruction. Jake Ranalli and Tina Bean own the MSA build.
Upsell path	Every Tier 1 buyer is a Tier 2 prospect. Tier 1 is the floor, not the destination.	Brand Direct buyers with platform ambitions move to Tier 3. High-volume buyers with enterprise scale move to Tier 4.	Martech platforms with large user bases and content consumption use cases move to Tier 4.	Ceiling. Renewal, expansion, price escalation tied to user-block growth.

*** UNRESOLVED: WHOLESALE CONTACT ACCESS FOR LEAD GEN / COMPETITOR BUYERS**

The tiered model above excludes lead gen businesses and competitors from contact-level data in Tiers 2, 3, and 4. They can buy Tier 1 (persona + intent, no PII). However, Jeff has indicated openness to selling contact-level data to these buyers under controlled conditions. If approved, this becomes a **Tier 2 variant** with additional guardrails:

What the variant would look like: Same Tier 2 data (contacts + intent topics, no content consumption). Credits-based or volume-capped access (not unlimited). Higher price point than standard Tier 2 to account for the elevated risk. MSA includes enhanced anti-competitive clause, strict permitted use definitions, caching restrictions, and audit rights.

Risks of allowing it:

1. **Competitive empowerment.** Lead gen competitors (6sense, Demandbase, ZoomInfo, Bombora, TechTarget, Madison Logic) could use pharosIQ contact data to enhance their own intent products. They have the infrastructure to absorb and operationalize it.
2. **Cannibalization.** Contact + topic signal overlaps with what Marty's team sells as demand gen leads. Wholesale buyers could self-serve instead of buying campaigns. The line Chris Vriavas drew on 2026-03-27 (topic signal yes, content detail no) helps, but doesn't eliminate the overlap entirely.
3. **Data leakage.** Once contact-level PII leaves pharosIQ's systems, control is limited. Current MSA has no caching terms, no TTL enforcement, no downstream passthrough restrictions, no audit rights. The new DaaS MSA must close these gaps before any wholesale contact deal closes.
4. **Precedent.** Allowing one lead gen competitor sets the expectation for all of them. Harder to say no to Bombora if you've already said yes to Madison Logic.

Risks of blocking it:

1. **Lost revenue.** Lead gen competitors are some of the highest-ACV buyers on the target list. Restricting them to Tier 1 caps their deal value at $60K-$96K instead of $144K-$300K+.
2. **They'll get similar data elsewhere.** Competitors already license contact data from Lusha, Apollo, ZoomInfo, and others. Blocking doesn't prevent them from building their product. It just means pharosIQ doesn't get the revenue.
3. **Mixed-model buyers walk.** Some buyers want persona for some use cases and contacts for others. If you can only serve half their needs, they find a single vendor who can serve both.

Immediate downstream impact: Integrate, April 2

Raj confirmed on March 26 that the commercial framework for **Integrate** is a **per-contact enrichment model** (CPL-based). Integrate is a lead distribution provider. Under the current tiered model, lead distribution providers are excluded from contact-level access (Tiers 2-4). That means the Integrate deal as currently structured does not have product authorization.

If wholesale contact access is approved with guardrails, Integrate proceeds as a Tier 2 variant (contacts + intent, CPL pricing, volume-capped). If it is blocked, the Integrate deal must be restructured as Tier 1 (persona only) or as a Surge Dossier play before the April 2 call. The DaaS MSA must be far enough along to support a term sheet or LOI by April 2 in either scenario.

Decision required: Jeff, Chris, and Marty need to determine whether wholesale contact access is approved (with guardrails), permanently blocked, or deferred pending the first round of Tier 1 and Tier 2 closes. This must be resolved before external pitches begin to lead gen buyers. The Integrate call on April 2 is the first live test of this decision.

WHAT THIS FRAMEWORK RESOLVES

Every DaaS prospect gets placed into a tier before the first pitch. The tier determines the product, the price floor, the MSA complexity, and the buyer restrictions. No more "it depends" on whether we sell contacts or persona. The answer is: we sell both, in a controlled escalation, with contractual guardrails that scale with the risk. The Jeff/Chris/Marty meeting must bless this framework and the tier assignments on the account matrix.

Engaged contact universe (1,606,731) sourced from Ben Luck, pharosIQ Chief Data Scientist, confirmed 2026-03-27. 90-day rolling window. Full contact universe: 360M+. Match rate data pending Ben Luck return from vacation approx. 2026-04-11.

Surge Product Suite: Signals, Snapshots, and Monitors

Subscription model. Annual contract. The DaaS tiers on page 1 define what data we license and to whom. This page defines how we package and price two product lines that ride on top of that data: **Surge Signals** (intent feeds that compete directly with Intentsify's $1.00/company offering at a 2-3x premium) and **Surge Dossiers** (AI-assembled account intelligence reports that no competitor can replicate).

Why pharosIQ Commands a Premium on Signals

1. First-party signals. pharosIQ's intent data comes from owned content properties (CONTENTgine + MRP). Not bid-stream inference, not co-op panels, not cookie-based guessing. First-party is the gold standard and buyers know it.

2. Persona-level resolution. Most intent data tells you "Company X is surging on topic Y." pharosIQ tells you which personas at Company X are showing intent. The difference between "someone at Salesforce is researching data orchestration" and "a VP of Revenue Operations at Salesforce is researching data orchestration."

3. 650+ intent categories on 360M+ contacts. The depth and breadth of the taxonomy is massive. No competitor matches this combination of first-party sourcing, persona resolution, and category breadth.

Surge Signals (Intent Feed)

Weekly refreshed intent signals matched to the buyer's target account list. The base layer.

TIER	ACCOUNTS	ANNUAL	MONTHLY	$/COMPANY
Starter	Up to 5,000	$24,000 min	$2,000	$4.80 at 5K
Growth	10,000	$36,000	$3,000	$3.60
Scale	**25,000**	**$62,500**	**~$5,208**	**$2.50**

TIER	ACCOUNTS	ANNUAL	MONTHLY	$/COMPANY
Enterprise	50,000+	$2.00/company	varies	$2.00 (floor)

What Makes Surge Dossiers Possible: Data Provenance

A Surge Dossier is not a generic company report. It is an AI-synthesized intelligence document assembled from pharosIQ's proprietary first-party signal chain. Every data point in the dossier traces back to a known content engagement on a pharosIQ-owned property. That provenance is what makes the dossier defensible, accurate, and impossible for competitors to replicate with scraped or co-op data.

What goes into a dossier: Which personas at the target company are actively researching which topics, how that activity has changed over time, what seniority levels and job functions are involved, which intent categories are surging vs. cooling, and what that pattern means for the buyer's sales approach. The dossier connects the signal to the strategy.

Why competitors can't build this: Intentsify, Bombora, and other co-op/bid-stream providers can tell you an account is surging. They cannot tell you which specific personas are driving the surge, because they don't have first-party content engagement at the contact level. pharosIQ can, because the signal originates from content the company owns (CONTENTgine + MRP). That data provenance is the moat.

Surge Dossiers: Snapshots (One-Time)

Point-in-time dossier on a surging account. Event-driven: prepping for a meeting, responding to an inbound.

PACKAGE	DOSSIERS/MONTH	MONTHLY	ANNUAL	PER DOSSIER
Snapshot 10	10	$1,000	$12,000	$100
Snapshot 25	25	$2,000	$24,000	$80
Snapshot 50	50	$3,500	$42,000	$70

OPEN QUESTION: SHOULD DOSSIERS INCLUDE CONTACT RECORDS?

Currently, dossiers deliver account-level and persona-level intelligence (who is surging, at what seniority, on which topics) but do not include named contact records. Including contacts in dossiers would increase value and price point, but it also changes the MSA

requirements, the tier restrictions, and the channel conflict profile. This needs to be discussed and decided together before dossiers go to market.

Surge Dossiers: Monitor (Living, Monthly Refresh)

Living dossier, refreshed monthly with new signals, updated persona activity, competitive shifts. Strategic accounts, enterprise pursuits, long sales cycles.

PACKAGE	MONITORED ACCOUNTS	MONTHLY	ANNUAL	PER ACCOUNT/MO
Monitor 25	25	$3,750	$45,000	$150
Monitor 50	50	$6,000	$72,000	$120
Monitor 100	**100**	**$10,000**	**$120,000**	**$100**
Monitor Unlimited	All surging accounts	$15,000	$180,000	Depends on surge volume

White-Label / Reseller Dossiers

Partners can resell pharosIQ dossiers under their own brand. The end buyer sees the partner's logo and branding; pharosIQ data powers the content underneath. Ideal for lead distribution providers, agencies, and platforms that want to offer dossiers as a value-add to their clients without building their own research capability.

MODEL	WHAT THE PARTNER GETS	PRICING	MSA REQUIREMENT
Co-Branded	"Powered by pharosIQ" on dossier. Partner's logo and layout. Fastest to deploy.	Standard dossier pricing (no markup)	Co-brand addendum
White-Label	Partner's branding only. No pharosIQ attribution visible to the end buyer. Full brand control.	1.5x standard dossier pricing, or $3K-$5K/mo flat license + standard per-dossier rate	White-label addendum: brand usage rights, quality control provisions, disclosure requirements
Reseller	**Partner sets their own price to the end buyer. pharosIQ provides the dossier at wholesale. Partner keeps the spread.**	**Wholesale rate: 50% of standard pricing. Volume minimums apply.**	**Reseller agreement: downstream flow-down, anti-competitive clause, volume commitments**

> **Who this is for:** Lead distribution providers (Integrate, Madison Logic, LeadScale, Enhancio, Converter) who want to attach dossiers to the leads they route. Agency holding companies (WPP, Publicis, Omnicom) who want to offer dossiers as a research product to their clients. Any Tier 2 or Tier 3 buyer with a downstream customer base that would value account intelligence.

Dossier Unit Economics

Generation costs and margins by channel. These costs represent the fully loaded cost to produce one dossier (AI compute, data retrieval, formatting, delivery).

CHANNEL	SELL PRICE	GEN COST (EST.)	GROSS MARGIN	NOTES
Snapshot (direct)	$70-$100	~$5-$8	90-93%	AI compute + data retrieval + formatting. Highest margin product.
Monitor (direct)	$100-$150/mo	~$8-$12/mo	88-92%	Monthly refresh adds incremental compute. Still very high margin.
Co-Branded (partner)	$70-$100	~$5-$8	90-93%	Same as direct. Partner gets co-brand at no extra cost to pharosIQ.
White-Label (partner)	$105-$150 (1.5x)	~$5-$8	93-95%	White-label premium is nearly pure margin. No additional COGS.
Reseller (wholesale)	**$35-$50 (50% of standard)**	**~$5-$8**	**78-86%**	**Lowest margin but highest volume potential. Partner marks up to their client.**

> **Key takeaway:** Dossiers are a software-margin product. The AI generation cost is fixed and low (~$5-$12 per dossier depending on complexity). Every pricing tier, including the 50% reseller discount, delivers 78%+ gross margin. The reseller channel trades margin for volume and distribution reach.

Common Bundles (How Deals Will Close)

Land with a bundle, expand into higher tiers. This is a land-and-expand play: every Scout buyer is a future Hunter, every Hunter is a future Command. The signal feed creates dependency, the dossiers create stickiness, and the monitor creates an annual renewal that grows with the buyer's account coverage.

BUNDLE	WHAT'S INCLUDED	ANNUAL	SWEET SPOT BUYER
Scout	Signals (5K) + Snapshot 10	**$36,000**	SDR team, early-stage pipeline
Hunter	Signals (10K) + Snapshot 25	**$60,000**	Mid-market sales org
Command	Signals (25K) + Monitor 50	**$134,500**	Enterprise ABM team
Warroom	Signals (50K+) + Monitor 100	**$220,000+**	Full revenue org, strategic selling

Why the Monitor premium is justified: A Surge Monitor account at $100-150/month is high, but it replaces 2-3 hours of manual research per account before every touchpoint ($75-150 in loaded labor cost per session), plus the tool stacking cost of ZoomInfo + Bombora + manual research ($100+/account). The Monitor delivers a continuously fresh, AI-synthesized view with persona-level signal tracking that no amount of manual research replicates. The pitch: "Your reps spend 3 hours prepping for every enterprise meeting. Monitor does it in 60 seconds, and it's never stale."

Who Can Sell This: Surge Signals and Dossier products are sold by both the DaaS team (Tina) and the direct sales team. Dossiers in particular need to be in the hands of the sales reps who are closest to the buyer's workflow. For the DaaS tiers (page 1), Tina owns the relationship. For Surge products, both Tina and Marty's team can sell, with Tina leading on strategic/enterprise bundles and the sales team leading on transactional/mid-market deals. Swim lanes to be confirmed in the Jeff/Chris/Marty meeting.

LAND AND EXPAND

Every deal starts with a signal feed or a snapshot package. That's the land. The expand is the upsell from Snapshot to Monitor, from Monitor 25 to Monitor 100, and from signals-only to signals + dossiers. The signal feed creates dependency (their outbound runs on it). The dossiers create stickiness (their reps rely on it for prep). The monitor creates an annual renewal that grows with the buyer's account coverage. This is not a one-time product sale. It's a recurring revenue engine.

Martech Target Accounts: Authorization Matrix

PHAROSIQ CONFIDENTIAL

MARCH 2026

> **Purpose:** For each target account, assign the authorized tier, estimated ACV, who makes the intro, and the buyer type. Track pipeline stage. All selections persist automatically.

T1: 0 T2: 0 T3: 0 T4: 0

Accounts: 44 | Total ACV: $17.3M
